Profile

Established:	1969
Current acres:	2,276
Staff:	5
FY 2003 budget:	
2002 volunteer hours:	684
2002 visitation:	18,426

Managed as the Potomac River NWR Complex, which includes Mason Neck, Occoquan Bay and Featherstone NWRs.

Purpose

Mason Neck was the first national wildlife refuge established to preserve nesting, feeding and roosting habitat for the threatened bald eagle.

Public Use Notes

- Refuge is available for use as an outdoor classroom
- Opportunity to observe and learn about more than 300 species of wildlife in wetland and forest habitats

Management Activities

- Manage refuge areas to prevent disturbance of nesting bald eagles
- Monitor local bald eagle populations
- Manage refuge ecosystems (forest, grassland, wetland) for the benefit of migratory birds
- Implement and oversee bald eagle research

Highlights

Seven bald eagle pairs nest on or adjacent to the refuge and up to 100 bald eagles use the refuge as a wintering ground.

The refuge protects valuable wetland and forest habitat located at the confluence of the Potomac and Occoquan rivers, 18 miles south of Washington, D.C.

One of the largest great blue heron colonies in Virginia (up to 1,600 nests) is found on the refuge.

The refuge, Mason Neck State Park, Pohick Bay Regional Park and Gunston Hall Plantation and BLM collectively protect more than 6,000 acres of land in the area. The refuge shares resource protection and visitor services with these partners.

The refuge provides environmental education through a local high school magnet program.

Issues

High bluffs along the river are subject to erosion.

Limited public access is necessary to prevent disturbance to eagles and herons.

Healthy partnerships may be contingent upon availability of Service contributions in the form of funds or other resources.

The mission of the U.S. Fish and Wildlife Service is working with others to conserve, protect and enhance fish, wildlife, plants and their habitats for the continuing benefit of the American people.
